Research Interest

My research focuses general and interpretable computational photography, with a strong interest in low-level vision, and generative/interactive tasks. Specifically, my research experience has concentrated on image/video enhancement, HDR inverse tone mapping and super-resolution.

Work Experience

Microsoft Research Asia (MSRA)

Full-time Research Intern

2023

- *Mentor*: Dr. Bin Li & Dr. Jiahao Li
- Assess the performance of image codecs under challenging scenarios (e.g., degraded inputs and extreme-low bitrates)
- Reveal long-termly overlooked drawbacks of clean-data-specific codecs in handling degraded inputs.
- Develop general neural image codec with the restoration ability for degradations of different types and degrees.
- Part of this internship is accepted to WACV 2025.

Kuaishou Technology

Full-time Research Intern

2021

- *Mentor:* Prof. Yu-Wing Tai & Weinong Wang
- Design the decoupling and recycling algorithm for efficient interactive segmentation.
- Deploy the efficient interactive segmentation algorithm on multiple lightweight backbones.
- Develop the interactive segmentation function of the Kuaiying APP.
- Part of this internship is accepted to ACM MM 2023.

Research Project

Arbitrary-Scale 3D Gaussian Super-Resolution with Diffusion Prior

Boston, U.S.

Northeastern University

9/2024 - 1/2025

- Existing 3DGS-based high-resolution novel view synthesis (HRNVS) methods focus on upsampling with fixed scale factors (e.g., $\times 2$ and $\times 4$), ignoring the intrinsic continuous characteristic of 3D world and the need to flexibly adjust rendering accuracy based on available resources.
- We make the first attempt to achieve 3D super-resolution of arbitrary scale factors with a single 3DGS model, providing a unified and efficient solution for flexible HRNVS.
- To enrich the details of the reconstructed 3D model, we explore the powerful generative prior (i.e., StableSR), to refine the high-frequency details in the novel views and inject the generated structures into the 3D model.
- Extensive experiments demonstrate the superiority of our method in rendering high-quality super-resolved results, including non-integer scale factors.
- Under Review.

Plug-and-Play Versatile Compressed Video Enhancement

Hefei, China

University of Science and Technology of China

11/2022 - 9/2024

- Compressed videos suffer from unsatisfying perceptual quality and lead to performance degradation in various downstream tasks.
- We introduce a versatile quality enhancement framework that adaptively enhances videos of different compression levels and assists various downstream vision tasks.
- Our approach takes advantage of the overlap between video coding and video quality enhancement. We reuse the off-the-shelf information embedded in the bitstream instead of estimating it from scratch, which contributes to the generalization ability and model performance.
- Extensive experiments demonstrate the effectiveness of our framework in assisting downstream tasks as a plug-and-play enhancement module, and outperforming existing quality enhancement methods in terms of performance and efficiency.
- Accepted to **CVPR 2025**.

All-in-one Image Compression and Restoration

Hefei, China

University of Science and Technology of China

5/2023 - 5/2024

- Image compression methods tailored for clean images tend to faithfully preserve undesired degradations for corrupted inputs, leading to a waste of bits and visually unpleasant results.
- We design a unified pipeline for all-in-one image compression and restoration, which models long-range dependencies and captures discriminative representations with a dual attention mechanism.
- Experimental results demonstrate the effectiveness of our method on various degradations without sacrificing the rate-distortion (RD) performance on clean data.
- This work equips the neural image codec with the restoration capability and improves its generalization ability against various degradations.
- Accepted to **WACV 2025 (oral)**

Education

Northeastern University

PhD. in Computer Engineering

Boston, U.S.

09/2024 - Present

- **Advisor:** Prof. Yun Raymond Fu
- **Research topic:** 3D Vision, Low-level Vision

University of Science and Technology of China

Hefei, China

M.S. in Information and Communication Engineering

09/2021 - 06/2024

- **Advisor:** Prof. Zhiwei Xiong
- **Research topic:** Image/Video Enhancement, Interactive Tasks

Ocean University of China

Qingdao, China

B.S. in Electronic Information Engineering

09/2017 - 06/2021

- **Advisor:** Prof. Haiyong Zheng & Prof. Zhibin Yu
- **Research topic:** Image/Video Generation, Underwater Image Enhancement
- **GPA:** 3.86/4.0

Teaching & Service

Teaching Assistant

Undergraduate course “Object-Oriented Programming”, “Data Structures”.

Journal Reviewer

TPAMI, TKDD, TMM, NPJ Artificial Intelligence

Conference Reviewer

ACM MM 2023/2024, ECCV 2024, WACV 2025, CVPR 2025, ICCV 2025

Achievements & Awards

ChinaMM 2019 Underwater Image Enhancement Challenge (**Winner**)

2019

2019 National Artificial Intelligence Challenge on 4K UHD HDR (**Top 15%**)

2020

Outstanding Student Scholarship (Grade 1/ Grade 2)

2023/2022

Outstanding Freshman Scholarship (Grade 1)

2021

The First Prize Scholarship

2018/2020

The Second Prize Scholarship

2019

The Research and Innovation Scholarship

2019
